Vice President of Information Technology and CIO

DATE: November 1, 2012

SUBJECT: Security Awareness Training Now Available and Live!

As part of our continued Security Enhancements Strategy for the university and in keeping our university *Worlds Ahead*, today we are launching our Security Awareness Training.

Safeguarding the security of our university’s data is of utmost importance. In order to maintain a secure computing environment it is essential that all members of our university community be responsible for the data they manage.

The Division of Information Technology is now providing an online Security Awareness Training module to help our employees understand policies and procedures, identify sensitive data and prevent the loss of sensitive data as well as protect existing resources in their roles as data stewards.

This necessary training is part of the IT Security Strategy that is being implemented university-wide. Please visit the IT Security Strategy Project page for more information and for instructions on how to complete our Security Awareness Training: [http://it.fiu.edu/about/projects/online_security.shtml](http://it.fiu.edu/about/projects/online_security.shtml)
